

Instructions for lantern making

Bind the sticks together tightly with masking tape in a triangle shape

Carry on binding the sticks together to create a 3 sided pyramid form

Attach a stick in the centre of the base triangle

Attach another stick from the centre of the base vertically to the top point of the pyramid. This stick is used to attach the glow stick (tape with masking tape).

Cut a piece of coloured tissue paper into a triangle shape, larger than the frame size. Apply PVA glue to the edges of the paper. Make sure that the paper is pulled taut to make sure that the finished lantern is a solid shape.

Carry on glueing coloured tissue papers onto all 3 sides of the lantern. Don't cover the base shape as this is where the glow stick is attached. Once the lantern is covered in 2 layers of paper you can begin to decorate it in your chosen design. The more decorative you make your lantern, the more effective it will look when it is lit with a glow stick.

Once your lantern is complete, paint the whole of the lantern with watered down PVA glue. This will make the lantern stiff & stronger when it is dry & give the tissue paper a translucent effect.

When the lantern is dry, attach a garden cane, horizontally to the top point of the pyramid for the handle.
